## Resume

As an Oceanographer with additional training in Cyber Defense from FIAP, I have specialized in the intersection between ocean science and data technology, with a focus on the acquisition, processing, and analysis of oceanographic data through advanced methods. My experience ranges from the use of bathymetric technologies and GIS analysis to the application of precise positioning systems, such as RTK and DGPS, in hydrographic and geophysical service projects. I possess solid skills in handling environmental data, such as ADCP, CTD profiles, dissolved oxygen, as well as data on waves, currents, sea levels, and meteorology. My proficiency in Python programming, enhanced by knowledge in data analysis and cybersecurity, allows for the development of efficient routines for processing and presenting oceanographic data. Experience in cybersecurity complements my analytical capability, bringing a rigorous approach to the protection, analysis, and management of sensitive data, essential for the integrity and security of oceanographic projects.

## Professional Experience

October 2021 – Now

### Freelance - DataProcessor

- MBES processing through the softwares: QPS Qimera and FMGT, EIVA NaviEdit and Navimodel, Beamworx AutoClean and AutoPatch. Data validation, calibration, backscatter, quality control, deliverables production.

- Multisource Data Integration: Combining bathymetric data with other geospatial data sources and python for comprehensive analysis.

Qimera AutoClean Eiva NaviEdit Navimodel QGis FMGT Python GlobalMapper

November 2022 – May 2024

### Mazars

- Internal and External Pentesting
- Pentesting on Web Applications
- Implementation of Security Policies following guidelines from CMN, Bacen, CVM, NIST, and ISO 27K
- Monitoring, auditing, and assessing the maturity of information security processes
- Analysis and mitigation of risks and vulnerabilities in cyber security systems, applications, processes, and infrastructures.
- Automate internal processes, creating interactive dashboards and web systems

Pentest Audit Vulnerability Assessment

April 2018 – July 2021

### EGS Brasil

Data processing with Python and the development of technical reports for clients, incorporating automated methods for document creation using the language. Utilized libraries include Numpy, Pandas, Matplotlib, Cartopy, Seaborn, gsw, pylab, and pycircstat. Maintenance, testing, and development of

procedures for oceanographic electronic equipment such as SBES, ADCP, CTD and HOB0. Data acquisition via watercraft, conducting surveys, and installing tide gauges.

Data Analysis Python Geoprocessing

February 2016 – December 2016

## Ecoceano - Junior Consulting Company in Oceanography and Environmental Education

Managing cash flow, preparing informative reports, conducting strategic planning, and supervising advisors in the distribution of tasks.

Environmental Education Cash Control Accounting

## Education & Certifications

- Cyber Defense - Faculty of Informatics and Administration Paulista - FIAP [2022]
- Bachelor's in Oceanography - Federal University of Espírito Santo - UFES [2018]
- Basic Offshore Safety Induction and Emergency Training (BOSIET) and Compressed Air Emergency Breathing System (CA-EBS) - [2028]
- Offshore Energies UK (OEUK) - [2026]
- Basic Safety Induction, Emergency Training (CBSP) & Helicopter Underwater Escape Training (HUET) - [2026]

## Experience

December 2016 - Now

### Data Processor

Data analysis; Data qualification; Creation of data processing workflows; Automation of data processing.

Anaconda Github Python PHP Matlab ArcGis Qgis Autocad Hypack Qimera GlobalMapper FMGT

January 2021 - Now

### Cyber Security

Internal and External Pentesting; Web application pentest; Vulnerability analysis.

Linux Python SQL C Ruby Power Shell Bash Nmap Nessus Shodan GitLab GitHub AWS Azure
